

## Our Vision

SUSTAINLUUM is created to design, apply and influence sustainable strategies based on the specialized experience of a team of expert consultants with the **capacity** to act as agents of change and create a future that focuses on the welfare and the competitiveness of the organizations, consistent with an intergenerational commitment.

## Management Systems

ISO (International Organization for Standardization) develops and publishes International Standards that play an essential role in the Climate Agenda, helping to mitigate climate change, quantify GHG emissions, manage energy, and promote the best practices in environmental management.

All companies should work on identifying their risks and defining strategies that allow their evaluation, monitoring, and mitigation promptly. Risk management should take into account the internal and external factors. Management systems address the identified risks at an organization and help to manage the defined strategies.

Advantages of management systems:

- Cost reduction
- Social, environmental and financial risk management
- Increased client satisfaction
- Strengthening innovation
- Possibility of continuous improvement
- Ease of access to new markets

**SustainLuum** offers to its clients a team of experts in the implementation, evaluation, and maintenance of management systems.

The management systems services offered by SustainLuum are:

### ISO 14001:2015 – Environmental Management Systems

ISO 14001:2015 standard provides organizations with a framework to protect the environment and respond to the changing environmental conditions, in balance with the socio-economic needs. This international standard helps companies to address their climate change challenges. We offer consulting services in gap analysis, an implementation based on risk management, internal audit, KPIs design, training, and maintenance, of environmental management systems.

### ISO 50001:2018 – Energy Management Systems

ISO 50001:2018 provides a framework of requirements to establish energy management systems (EnMS) and processes to continually improve energy performance, including energy efficiency, use, and consumption. We offer consulting services in gap analysis, implementation, internal audit, training, and maintenance, of energy management systems.

### Legal Compliance Audits

A legal compliance audit is an evidence-based systematic and objective review of an organization's compliance with environmental and energy enforcement legal requirements. We offer consulting services in the identification of applicable legal requirements of companies, on-site audit, review of compliance with authorization and permit conditions, and advice on the resolution of detected non-compliances.

### Life Cycle Assessment

Life cycle assessment (LCA), based on the international standards ISO 14040:2006 and ISO 14044:2006 and their applications, to allow a correct quantification, communication, and improvement of the environmental impact of products and companies. We offer consulting services in Product Life Cycle Assessment, and Carbon and Water Footprint.
